### Validated Integration

JD Edwards  
EnterpriseOne

Oracle Validated Integration provides customers with confidence that a partner's integration with an Oracle on-premises application is functionally sound and performs as designed. This can help customers reduce deployment risk, lower total cost of ownership, and improve the user experience related to the partner's integrated offering.

### Spend time maintaining your equipment, not your interfaces.

CAM Performance Plus for Oracle's JD Edwards EnterpriseOne helps companies to improve the end-user software experience while adding enhanced functionality to enhance maintenance, procurement, and storeroom processes.

### Company Overview

Founded in 2003, Asset Management Solutions, LLC focuses on utilizing technology to provide comprehensive asset and maintenance management solutions. Its mission is to assist clients in optimizing the financial and operational performance of their assets. Asset Management Solutions takes pride in a reputation for providing quality professional services, high customer satisfaction, and technical expertise.

### Integration Overview

CAM Performance Plus is a collection of software modules designed to improve the usability and functionality of JD Edwards EnterpriseOne Capital Asset Management. Written in the JD Edwards EnterpriseOne development toolset, CAM Performance Plus is fully integrated with JD Edwards EnterpriseOne 9.2 and provides the following benefits:

- **Consistent interface.** All CAM Performance Plus programs and screens look and behave like the rest of JD Edwards EnterpriseOne software.
- **Ease of use.** More intuitive screens and fewer clicks to perform routine tasks means happier users and fewer support calls.
- **Less administration.** Security, configuration, and deployment are all managed in the same manner as the rest of the JD Edwards EnterpriseOne application.

### Integration Details

Designed with the end-user in mind, CAM Performance Plus is a collection of usability enhancements (fewer clicks means happier users) and functional enhancements to supplement JD Edwards EnterpriseOne Capital Asset Management, JD Edwards EnterpriseOne Procurement and Subcontract Management, and JD Edwards EnterpriseOne Inventory Management.

The PrintCue attachment printing utility allows users to print complete work order and purchase order documents that include media object attachments from within EnterpriseOne, improving the accuracy and completion rates of these tasks.

**AVAILABILITY**

Asset Management Solutions, LLC

 White Salmon, WA 98672

Asset Management Solutions’ preventive maintenance (PM) enhancements simplify routine tasks that are very complex in native JD Edwards EnterpriseOne Capital Asset Management. With CAM Performance Plus, maintenance users now have the ability to set up nested PM associations (such as A-B-A-C-A-B-A-D service sequences) and efficiently set up model work orders for PM service in one-third the keystrokes of the normal process.

Several applications focus on enhancing the maintenance, repair, and operations (MRO) storeroom relationship. Enhanced item search and item specification data provide a robust way to track and search for MRO spare parts by vendor, OEM, or even item attributes (for example, ¾” ID x 1 ¼” OD, 316 stainless steel tapered roller bearing). The PARTS Pro (Part Availability and Ready To Schedule) applications automate the planning, commitment, and picking of materials for routine planned jobs and complex shutdown events by managing priority of work, start dates, and availability of purchased and stocked parts.

**SUPPORT**

For more information or to schedule a software demo, please contact AMS at 509.493.3263 or send your request to [demo@amsEAM.com](mailto:demo@amsEAM.com)

CAM Performance Plus also manages the work order lifecycle by providing task-specific applications purposefully designed for the request-approve, plan, schedule, execute, review-close cycle. A simplified work request application allows operations and casual users an efficient way to log routine or emergency work requests. Enhancements to the Planning Workbench feature provide better ability to source and track materials and vendor services. The Trades Workbench feature provides a focused work queue to facilitate work against the work order, including simplified time entry and work order closure.

With simplified user screens and enhanced functionality, CAM Performance Plus for JD Edwards EnterpriseOne 9.2 simplifies configuration, management, and completion of all of your routine and complex maintenance tasks for your maintenance organization. When your staff spends more time maintaining equipment rather than struggling with software interfaces, the result is reduced downtime, greater utilization, and more efficient coordination of all functions in the maintenance process.
