

ASSET MANAGEMENT SOLUTIONS

Disconnected / Connected Mobile Work Orders & Storeroom Processing 2nd Generation Mobile for JD Edwards EnterpriseOne

Your equipment & production downtime aren't confined to an office, why should your CAM system be?

Let us show you what your JD Edwards Mobile experience can feel like with applications built to be used as "tools" instead of "transaction recorders."

- ✓ When you're taking your tools to where the equipment is located, you need to be able to use them in a disconnected mode
- ✓ When completing a work order: record downtime, repair time, materials used, notes, photos, meter readings, and failure codes – all in one app!
- ✓ Simplified entry of new work
- ✓ Backlog of assigned and new "break in" work orders
- ✓ Ability to perform "pre-start" inspections and maintenance checklists
- ✓ Mobile storeroom processing; inventory inquiry, inventory issue, purchase order receiving, inventory transfer, work order issue, and cycle count – all in one app!

Transform your JDE CAM solution into a tool every mechanic wants to use!
