

ASSET MANAGEMENT SOLUTIONS

PM Plus

The existing Oracle JD Edwards EnterpriseOne PM setup is complex, redundant, and requires too many mouse clicks and screens for even the simplest of tasks!

We've created the PM Plus solution to intuitively notify your team when maintenance needs to occur – whether by equipment usage or time. PM Plus can also make historical corrections to meter readings – solving a huge problem in the existing native JD Edwards EnterpriseOne software.

Manage PMs Better

The PM software for JD Edwards EnterpriseOne is complex; it can take up to 14 different screens and over 150 clicks to setup and schedule a simple oil change!

PM Plus addresses these pain points! PM Kit Wizard simplifies the model work order process significantly. In 4 simple screens and 1/3 the number of clicks, you can intuitively manage PM's for all of your equipment.

AMS PM Plus is the Best Way to Manage Maintenance

- Reduces the number of screens and "clicks" in the PM process by 2/3rds
- Manage PM set up in 4 intuitive steps
- Easy to train and maintain with your team
- Customize unique PM variables according to calendar schedules, meter values or historical time periods
- Fix historical errors, ensuring proper PM generation in the future

In simplest terms, we've removed all of the erroneous fields you don't need to look at and greatly reduced the number of clicks. Our enhancement makes your PM software easier to use, easier to train others, saves time, and saves money.

PM Plus

The Right Way to Handle Preventative Maintenance!

Let's face it... PM's can be extremely difficult to manage for larger industries. We had basically stopped using the Preventative Maintenance module in CAM, and were tracking all PM's on spreadsheets. With PM Plus, all of our fleet PM's are generated correctly for each and every service interval. That's why we recommend AMS PM Plus for JD Edwards EnterpriseOne. AMS has fixed a redundant and confusing program and made it incredibly easy to use. Results speak for themselves!

~ Fleet Manager, Heavy-Civil Construction Industry

Service "A"
250 Hours

Service "AB"

Service "AC"
1000 Hours

Service "A"
1250 Hours

Service "AB"
1500 Hours

PM Plus Gives You Service Control

Every 250 hours, you need to schedule an oil change (Service "A"). However, every 500, 1000 and 1500 hours you need to add additional required maintenance services (we'll call these Service "AB", Service "AC", and Service "AD"). This isn't possible with the native JD Edwards EnterpriseOne software, which creates a cumbersome problem.

Our customers know that PM needs are different throughout the calendar year, or based on the operation of the equipment. A unique feature of PM Plus is our ability to "nest" PM services, ensuring your service interval is maintained and the correct level of maintenance triggers when due. No more situations where PM's generate "out of sequence."

Need to fix a bad meter reading? No problem. With PM Plus, you can correct meter values, completion history and update PMs without a lot of headache. Keep it in the hands of the maintenance team and eliminate IT frustrations!

ASSET MANAGEMENT SOLUTIONS
solving real time problems

Why Asset Management Solutions?

- ✓ We fix problems so your systems work better
- ✓ Because every click counts
- ✓ Eliminate your bottlenecks

Software Installation → Configuration & Testing → Rollout & Support

AMS is with you every step of the way with our precise and custom set of extension tools to address each of your specific needs.

As an Oracle Gold Partner, we have over 20 years experience eliminating headaches, reducing wasted resources, increasing proficiency, and helping our global clients save time and money.
