

ASSET MANAGEMENT SOLUTIONS

JD Edwards EnterpriseOne Condition Based Maintenance

“80% of all equipment failures are random”

- You can't reliably predict all equipment failures based on a calendar. Most preventive maintenance programs are time-based and that's a problem.
- Condition Based Maintenance allows you to focus attention and resources on your “most important” equipment, critically high value equipment, and make maintenance decisions based on condition, rather than time or usage intervals. The benefits of identifying equipment problems real-time:
 - Failures are less costly to correct
 - Maintenance can be performed only when needed
 - Increased asset utilization
 - Extended equipment life
 - Reduced maintenance costs
 - Intervene before failure to reduce collateral damage and downtime

Automate Responding to Incoming Equipment Alerts
